GitHub | LinkedIn

Education

Don Bosco Institute of Technology, Bengaluru
B.E. in Electronics and Communication Engineering

Nov2022–Dec 2026
GPA: 7.4/10

Skills

Languages: Java, JavaScript, HTML5, CSS, Node.js
Frameworks/Libraries: Spring Boot, React.js, Express.js, Tailwind
Databases: MySQL, MongoDB
Cloud & DevOps: AWS, Docker, Firebase
Testing and Tools: Junit, Mockito, Jest, Supertest, Git, Postman

Projects

SkillPilot [Demo]

Tech: React.js, Node.js, Express.js, MongoDB, Socket.io, Docker, AWS, Jest

- Architected a educational platform for real-time coding battles and adaptive assessments; optimized system availability by implementing multi-tier rate limiting and server-side caching for high-frequency curriculum data.
- Engineered a Secure Remote Code Execution (RCE) Engine using Docker-based sandboxing to execute Java, Python, and JS in isolated environments with 256MB memory caps and network restrictions.
- Implemented Automated Quality Assurance using Jest and Supertest, achieving 83.7% code coverage on the core execution engine through rigorous integration testing and Docker mocking.
- Deployed the backend on AWS EC2 with PM2 for zero-downtime process management and Nginx as a reverse proxy; hosted the React SPA on Vercel with custom rewrite rules to handle client-side routing.

WebhookHub [Demo]

Tech: Java, Spring Boot, MySQL, React, WebSocket, Render, Vercel, Node.js

- Built a developer tool to intercept, debug, and tunnel cloud webhooks (Stripe, GitHub, Razorpay etc...) directly to local development environments.
- Developed and published a global CLI tool (webhookhub-tool-abhi777) to the NPM Registry, featuring JWT-based interactive authentication and secure local configuration management.
- Architected a low-latency event-driven bridge using STOMP over WebSockets, achieving sub-second data forwarding from cloud-received webhooks to local servers behind NAT/Firewalls.
- Implemented cryptographic signature verification (HMAC-SHA256) to ensure secure data ingestion, with 100% logic coverage through a suite of unit and integration tests.
- Built a persistence layer to store webhook history, featuring an "Event Replay" tool for re-triggering failed events and a live analytics dashboard for monitoring data trends.

AI Resume Analyzer

Tech: React.js, Llama-3.1, PDF.js

- Built a client-side resume parser using PDF.js for text extraction from PDF uploads.
 - Integrated a local Llama-3.1 model to generate structured feedback on resume clarity, formatting, and improvement points.
 - Designed a clean UI for instant analysis and better user guidance.
-

Certifications / Extracurricular

- Certificate in Java Development by IBM
- Coursera Certificate in AWS Fundamentals, Coursera
